

The Solar System - Who is Right?

Conrad: All the planets move the same way around the Sun.

Jen: Some planets go one way around the Sun and some go the other way.

Alice: The further a planet is away from the Sun, the slower it moves.

James: The further a planet is away from the Sun, the faster it moves.

Terrie: The most massive object in the Solar System is The Sun.

Roland: The most massive object in the Solar System is the planet Jupiter.

Melissa: Most asteroids lie between the orbits of Mars and Jupiter.

Jim: Most asteroids lie between the orbits of Mars and Venus.

Melanie: Mercury and Venus are both closer than the Earth to the Sun.

Alistair: Mercury and Venus are both further away than the Earth to the Sun.
